Homework

Exercises

1. **Craigslist Hacker**

   Go to http://vancouver.craigslist.ca . Write some jQuery to:

   Get the HREF attribute of the first link on the page

   Get the number of links on this page

   Change the text for all links to be [Your Name]

   Make Craigslist's logo link to http://www.google.com

2. **Wiki Author**

   Write some jQuery to:

   Change every second paragraph to read "[Your Name] wuz here!".

   Add your own paragraph to the BEGINNING of any wikipedia article.

   Add your own paragraph to the END of any wikipedia article.

3. **Jukebox (part 3)**

   Starter code for this exercise is provided in the `jukebox` directory. Read through `jukebox/README.md` for instructions. You may (and should) complete this exercise in a group of two.

4. **[Bonus] Wiki Writer**

   Wikipedia thinks it would be awesome if their articles "typed" themselves out over time, instead of all of the text showing up at once. They've hired you to build a prototype for them.

   Write a function `wikiWriter` that, when called from the console on any Wikipedia article, clears the article text, and writes it back out to the page one character at a time.

Delivery

Show your code for exercise 3 (Jukebox) to Mitch or another TA. They will review your code and mark it as complete for you.
